About

What are aligners made of, and what do they look like?

Your Sonrise on-line virtually invisible aligners are made of a smooth, comfortable, BPA-free plastic. Our cosmetic aligners are developed uniquely in accordance with each client's treatment plan. This comfortable plastic aligner will not irritate your cheeks or gums like traditional metal braces so often do.

How do the aligners straighten teeth?

Over the course of treatment, you will be supplied with a series of aligners. Each aligner will make slight adjustments to tooth positioning, a process that's mapped out in advance by our fully trained orthodontic team, specifically for your needs. When the aligners are placed on the teeth, they cause the teeth to gradually shift from their current position. After approximately four weeks, you will begin using the next set of aligners, which will continue to straighten your teeth. Your aligners are then changed over every two weeks. It's amazing how quickly you will start to notice the change!

How will Your Sonrise on-line effectively move my teeth?

Your Sonrise on-line aligners move your teeth through the appropriate placement of controlling force. The main difference is that Your Sonrise on-line not only controls the force but also the timing of the force application. During each stage, only certain teeth are allowed to move. These movements are determined and remotely managed by the orthodontic team as they map out your unique Your Sonrise on-line treatment plan.
